

Caring for Orthopaedic Wounds

27 May 2023 (Saturday) 9.00am – 12.00noon
@ SingHealth Tower Function Room

Negative pressure wound therapy (NPWT), also referred to as vacuum-assisted wound closure (VAC), is used in both acute and chronic wounds. In recent years, there has been an increased use of NPWT in the management of Orthopaedic wounds.

In this workshop, we have an invited speaker who will be sharing her experience on managing Orthopaedic wounds. Also, do join us for an interactive workshop on the use of various NPWT modalities.
